Algorithms and Data Structures

COMP20003 Algorithms and Data Structures Header Files and Makefiles

Kris Ehinger
Department of Computing and
Information Systems
University of Melbourne
Semester 2

Multifile programs

- Multifile programs allow you to **reuse** code
- For example:
 - **Functions** associated with a **dictionary** can be used over and over in **different programs**
 - Can **change** underlying **data structure** for the **same program**, e.g. change from a list dictionary to a BST

COMP 20003 Algorithms and Data Structures

1-2

Header files

- **Header** files allow:
 - write a **function prototype** or **definition** once
 - then **use it in different files**
- For example:

```
#define TRUE 1
#define FALSE 0
```
- or

```
int comp(char *, char *);
```

COMP 20003 Algorithms and Data Structures

1-3

Header files

- To avoid retyping (and likely errors!), put the **definitions** in a **header** file, e.g.
header.h
- And in your program **file(s)** **include** the **header**:
#include "header.h"

COMP 20003 Algorithms and Data Structures

1-4

The University of Melbourne COMP 20003

Algorithms and Data Structures

Including header files

```
#include <stdio.h>
#include "dict.h"

int main()
{
    /* code in here can use
       definitions and prototypes in
       header*/
}
```

COMP 20003 Algorithms and Data Structures

1-5

Compiling multifile programs

- `gcc -o dict1 dict1.c bst1.c`
 - Prone to **typing errors**
 - **Recompiles everything** from the ground up
- **Makefiles**
 - Simplify the compilation command:
 - **make dict1**
 - Checks which **files** have been **changed**, and only **recompile** them

COMP 20003 Algorithms and Data Structures

1-6

Makefile

```
dict1: dict1.o bst1.o
    gcc -o dict1 dict.o bst1.o

bst1.o: bst1.c bst1.h
    gcc -c -Wall bst1.c

dict1.o: dict1.c dict.h
    gcc -c -Wall dict1.c
```

Algoirthms and Data Structures

Header files

- Contains
 - function declarations
 - macro definitions
 - shared among several source files

COMP 20003 Algorithms and Data Structures

1-17

Another example: list.h

```
#ifndef LISTH
#define LISTH

typedef struct node{
    data_t data;
    node_t* next;
} node_t;

int search_sorted( list_t* list, data_t value );

#endif
```

COMP 20003 Algorithms and Data Structures

1-18

list.c

```
#include "list.h"

int search_sorted( list_t* list, data_t value ) {
    //code for the search_sorted function here
}
```
